Description:

Tapalpa, is one of Mexico's most charming and picturesque Pueblos Mágicos (Magical Towns), known for its colonial architecture, mountainous landscapes, and peaceful, welcoming atmosphere. Located on top a plateau at the Sierra Madre Occidental, Tapalpa is distinguished by its natural beauty, traditional culture, and small-town atmosphere, all of which are a strong tourist attraction, with pine, oak forests and waterfalls such as La Luna and El Salto del Nogal, it is ideal for outdoor activities such as paragliding, hiking, mountain biking, camping, and many other adventure tourism, furthermore, its historic center preserves cobblestone streets, horses, houses with colonial architecture, and the main church of La Concepción, providing a perfect setting for strolling, admiring, and taking photos. The municipality is also known for its cultural festivals, traditional processions, and its cuisine, which includes Jalisco´s traditionall tequilas, dishes such as squash blossom quesadillas, tamales, and regional snacks.

Hotel Infrastructure and Capacity: Tapalpa has approximately 15 hotels and cabins distributed throughout the municipality. The total hotel capacity ranges between 400 and 450, serving national and international tourists seeking both simple accommodations and more comfortable boutique options.

Restaurants and Gastronomy: The municipality has approximately 20 to 25 restaurants and food stalls offering everything from traditional Mexican dishes to international options, promoting the delicious cuisine of the region and serving a diverse range of tourist needs.

WEATHER AND FLYING CONDITIONS

MEXICO GENERAL TOPOGRAPHY

Mexico is divided by two major mountain ranges: The Western Sierra Madre and the Eastern Sierra Madre, between them lies the central plateau, at an altitude of approximately 2,000 meters.

Towards the southern part of the country is the Neovolcanic Axis, which divides the country from north to south. Highest Volcanos such as 5,636m altitude Citlaltépetl on the East coast and 4260m altitude Nevado de Colima on the West rises only 25km from Tapalpa takeoff, some of the volcanos on this axis are curently active.

Tapalpa is located at the west part of the Volcanic Axis on the Pacific slope, this contributes to the direct influence of Pacific winds that rise toward the high plateau (altiplano).

SRS
SPORTS-CLASS
RACING SERIES

WEATHER AND FLYING CONDITIONS

MEXICO GENERAL TOPOGRAPHY AND PREVAILNG WINDS (NOVEMBER)

Tapalpa is situated to the west of the Trans-Mexican Volcanic Axis, which divides Mexico in half.

November marks the transition between the rainy season and the dry season.

- The rainy season is characterized by hurricanes that reach Mexico from the south, arriving from both the Pacific and Atlantic Oceans.
- The dry season begins in winter (November) with the arrival of cold fronts or “Nortes” cold winds from the north.
- November is characterized by sunny days with little wind, as it is the transition period between the two seasons.

SRS
SPORTS-CLASS
RACING SERIES

WEATHER AND FLYING CONDITIONS

LOCAL WINDS

In November, the local prevailing flyable winds for paragliding in Tapalpa come from the East, Northeast, and Southeast (E, NE, SE), particularly during the mornings and early afternoons.

- **Morning conditions:** Calmer, highly stable laminar winds ideal for smooth take-offs.
- **Afternoon conditions:** Reliable thermal activity develops, providing excellent cross-country (XC) lift.
- **Winds to avoid:** Stronger winds can pick up late in the afternoon, and any western wind components (W) should be strictly avoided as they create unsafe conditions at the launch sites.
